Peter Nyagaka

Full Stack Developer | Python • Flask • React • JavaScript • MySQL

0117067894 | peternyagaka5@gmail.com | GitHub: CyberNerd351 | LinkedIn: peter-n-99a0931b5

PROFESSIONAL SUMMARY

Computer Science student and Full Stack Developer with hands-on experience building web applications across frontend, backend, database, authentication, and API layers. Experienced with React, JavaScript, Python, Flask, MySQL, REST APIs, Git/GitHub, and responsive web development. Completed remote full-stack development internship experience at SaiKet Systems and developed multiple practical software projects. Strong self-directed problem solver with an interest in building reliable, maintainable products for distributed teams.

TECHNICAL SKILLS

Frontend: React.js, JavaScript, HTML5, CSS3, Bootstrap, responsive UI

Backend: Python, Flask, REST APIs, JWT authentication, Flask-CORS

Databases: MySQL, SQL, PyMySQL, relational database design

Development: Git, GitHub, API integration, debugging, testing, deployment

Remote Work: Written communication, independent execution, documentation, virtual collaboration, time management

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | SaiKet Systems | Remote

- Contributed to full-stack web development tasks across frontend, backend, and API components in a remote working environment.
- Applied Python, JavaScript and web development practices to implement and troubleshoot application features.
- Worked independently on assigned development tasks while communicating progress and technical issues through digital collaboration channels.
- Strengthened practical experience in software development workflows, debugging, version control and delivering work to defined requirements.

SELECTED PROJECTS

SmartHelbWallet | Full-Stack Financial Management Platform

Designed and developed a student-focused platform concept combining a React frontend, Flask backend and MySQL-backed data layer. Planned features include budgeting/allocation workflows, semester management, wallet functionality, authentication and M-Pesa/bank deposit integration.

BUSA Election System | Web-Based Election Management System

Built a Flask-based election system with a structured backend and database architecture for managing election positions, candidates and voting workflows. Focused on API design, data integrity and role-based access.

Cyber Inventory System | Small-Business Inventory Management

Designed an inventory management solution for a cyber café to track stock, purchases, sales and operational records, with an emphasis on a simple, fast workflow suitable for a small business.

Grab Hub | React Food E-Commerce Application

Developed a React-based food ordering/e-commerce application concept with product browsing, cart workflows and M-Pesa payment integration planning.

EDUCATION & CERTIFICATION

BSc. Computer Science | Egerton University | Expected 2029

Certified Full Stack Developer | Modcom Institute of Technology | 2025

ADDITIONAL INFORMATION

- Target roles: Full Stack Developer, Junior Software Engineer, React Developer, Python Developer, Backend Developer.
- Work preference: Remote / distributed teams.
- GitHub and LinkedIn profiles are available for portfolio and professional verification.
